

# **SATURATED STEAM - THE MARCET BOILER**

VDAS<sup>®</sup> TD1006

Benchtop apparatus that illustrates the pressure and temperature relationship for saturated steam.

# **KEY FEATURES**

- Compact, benchtop unit based on the classic Marcet boiler experiment
- Stainless steel vessel (boiler) for long life and ease of maintenance
- Proves the Antoine equation for saturated steam
- · Vessel (boiler) has viewing window to see the boiling process and the water level
- Simple and safe to use, includes temperature cut-out switches and a pressure-relief valve
- Electronic sensors measure boiler temperature and pressure, shown on a digital display in both SI and traditional units (including absolute values)
- Can connect to TecQuipment's Versatile Data Acquisition System (VDAS®)

# ■ SATURATED STEAM - THE MARCET BOILER

VDAS® TD1006

## DESCRIPTION

The TD1006 Marcet Boiler is a simple experiment to show the relationship between pressure and temperature for saturated (wet) steam for comparison with published results.

The apparatus consists of a rigid frame containing an insulated pressure vessel (boiler) and an instrumentation and control unit. The frame also has extra space for the optional VDAS® interface.

The electrically heated boiler holds water. As the water temperature increases, so does the pressure in the boiler.

A transducer and a thermocouple measure the boiler pressure and temperature. A digital display shows the values in both SI and traditional units (including absolute values).

The boiler includes a special-purpose glass window. It allows students to see the internal construction of the vessel, to see the boiling process and to check the water level

For sound engineering practice a mechanical Bourdon type gauge also displays the pressure. It works independent of the electrical supply so the user can always see the pressure in the vessel.

The electrical heater has a thermostat to limit the maximum heater temperature. A pressure relief valve limits the maximum boiler pressure. For safety, the equipment includes high temperature pipe to direct any vented steam away from the working area to a suitable drain

The design includes all possible safety and low-maintenance features, specially for educational use. TecQuipment has checked the corrosion-resistant, high-grade stainless steel boiler against the latest European safety standards.

You can do tests with or without a computer connected. However, for quicker tests with easier recording of results, TecQuipment can supply the optional Versatile Data Acquisition System (VDAS®). This gives accurate real-time data capture, monitoring and display, calculation and charting of all the important readings on a computer (computer not included).

## STANDARD FEATURES

- Supplied with comprehensive user guide
- Five-year warranty
- Made in accordance with the latest European Union directives
- ISO9001 certified manufacturer

# RECOMMENDED ANCILLARIES

 VDAS-F (frame-mounting version of the Versatile Data Acquisition System)

#### LEARNING OUTCOMES

- Variation of saturated steam pressure with temperature
- Confirmation of the Antoine equation

# **OPERATING CONDITIONS**

#### OPERATING ENVIRONMENT:

Laboratory

#### STORAGE TEMPERATURE RANGE:

-25°C to +55°C (when packed for transport)

# **OPERATING TEMPERATURE RANGE:**

+5°C to +40°C

#### OPERATING RELATIVE HUMIDITY RANGE:

80% at temperatures < 31°C decreasing linearly to 50% at  $40^{\circ}\mathrm{C}$ 

## **SOUND LEVELS**

Less than 70 dB(A)

## **ESSENTIAL SERVICES**

#### BENCH SPACE NEEDED:

Approximately 800 mm x 410 mm, plus space for a suitable computer if you need to use the optional VDAS®

#### **ELECTRICAL SUPPLY (SPECIFIED ON ORDER):**

• Single Phase, 220 - 240 VAC, 50/60 Hz, 5A

• Single Phase, 110 - 120 VAC, 50/60 Hz, 10A

# **SPECIFICATIONS**

TecQuipment is committed to a programme of continuous improvement; hence we reserve the right to alter the design and product specification without prior notice.

#### NETT DIMENSIONS:

800 mm wide x 410 mm front to back x 640 mm high and 40 kg

# APPROXIMATE PACKED VOLUME:

 $0.5 \, \text{m}^3$  and  $50 \, \text{kg}$ 

# **VESSEL CAPACITY:**

Approximately 1.75 litres

## **HEATER CAPACITY:**

1 kw nominal

#### DIGITAL DISPLAY:

- Shows temperature in Kelvin (absolute) and Celsius
- Shows pressure in Pascals (absolute) and bar (absolute)

#### MECHANICAL PRESSURE GAUGE:

Pressure in bar (for reference only)

#### NOMINAL MAXIMUM EXPERIMENT PRESSURE:

10 bar (absolute)
